

We are the only propeller repair facility in the state of Missouri with the Linden Propeller Prop Press 360.

The Prop Press 360 is a hydraulic propeller repair machine. We can repair your inboard prop without using damaging heat. We can modify your prop in ways that traditional prop repair can not do.

We also use TrueProp Software for propeller scanning. TrueProp is the most advanced propeller inspection software in the world. TrueProp Software, the sister company of HydroComp, allows for the most accurate readings of your propeller. You can't lie to TrueProp & TrueProp won't lie to you!
